WRIST SUP-  
PORT CAN BE  
PURCHASED

## The perfect partner

The keyboard is one of your most important tools – a true everyday hero. The Balance Keyboard is designed to be the perfect complement to RollerMouse Red, Red plus, Red max and Free3, and in combination with the various RollerMouse models the keyboard provides optimal working conditions. Balance Keyboard is both available in a wired and wireless version, and if you're not using a RollerMouse product, a wrist support can be purchased separately.

### Focus on comfort

No matter how much time you spend in front of the computer, it puts a surprisingly heavy strain on your body, which is why writing on your keyboard should be as convenient as possible. By placing the keyboard in front of your RollerMouse, you attain the perfect distance between keyboard and mouse. It positions your hands at the centre and ensures that you have the rollerbar and the keys right at your fingertips. The keyboard's negative slope makes sure that you keep an optimal hand position while you type, but you can obviously adjust the inclination of the keyboard at your wish.

### Functionality at your fingertips

The Balance Keyboard media keys provide direct access to the features you use most. If you need the traditional function buttons (F1-F12), you can activate them with the Fn key. The keyboard has flat keys with a scissor mechanism that gives a comfortable feel.

### Mac compatible PC keyboard

Balance Keyboard is a PC keyboard, but it can be converted to Mac mode if you want to use it with your Mac computer. The dual keyboard buttons give you a quick overview of the location of most Mac keys.
