

GDS® Slide Dock™ for IntelliSkin® Next Gen

The GDS® Slide Dock™ is a scalable solution for charging multiple devices at the same time. Compatible with Next Generation IntelliSkin® sleeves, two different versions allow you to either mount by drilling down or by attaching to magnetic surfaces. In addition, the GDS® connector's height can be easily adjusted to accommodate different devices, and each height setting is numbered to quickly set up charging carts. This GDS® Slide Dock™ has a USB Type-A male output that can plug into an existing USB port on a cart or into the GDS® 6-port USB charger. There is an LED indicator light that turns red when the dock is connected to power. When a device is charging, the LED indicator will glow green.

Compatible Devices:
IntelliSkin®-enabled devices

Features:

- Drill-down and magnetic options allow the GDS® Slide Dock™ to be easily secured
- Adjustable height accommodates a variety of different devices
- Compatible with Next Generation IntelliSkin® enabled devices
- Backed by a 3-year warranty
