Electricity and Safety

✎ The following images are for reference only. Real-life situations may differ from what is shown in the images.

⚠ Warning

Do not touch the power plug with wet hands.

Otherwise, an electric shock may result.
Do not bend or pull the power cable with force. Be careful not to leave the power cable under a heavy object.

Product failure, an electric shock or fire may result from a damaged cable.
Do not connect multiple products to a single power socket.

Overheated power sockets may cause a fire.

Insert the power plug all the way in so it is not loose.

An unsecure connection may cause a fire.

Clean any dust around the pins of the power plug or the power socket with a dry cloth.

A fire may result.

Connect the power plug to a grounded power socket. (Except for devices that do not provide grounding)

An electric shock or injury may result.

Do not use a damaged power plug or a loose power socket.

An electric shock or fire may result.

⚠ Caution
Hold the plug when disconnecting the power cable from the power socket.

An electric shock or fire may result.
When connecting the power plug to the port, be sure to connect it completely.

If the power plug is not completely connected to the port, the plug may be unexpectedly disconnected, or there is a risk of overheating due to overcurrent, leading to safety accidents.

Only use the power cable provided with your product by Samsung. Do not use the power cable with other products.

An electric shock or fire may result.

Keep the power socket where the power cord is connected unobstructed.

When a problem occurs with the product, the power cord must be unplugged to completely cut off power to the product. The power is not completely cut off by using only the Power button on the body of the product.

Do not disconnect the power cable while the product is being used.

The product may become damaged by an electric shock.

Installation

⚠ Warning

🛈 **Before moving the product, turn off the power switch and disconnect the power cable and all other connected cables.**

Damage to the cable may cause a fire or electric shock.

🛈 **When installing the product, keep it at a distance from the wall so that it is well ventilated.**

An increased internal temperature may cause a fire.

🛈 **If the product is installed in an unusual location, the surrounding environment may cause a serious quality problem. Therefore, be sure to contact Samsung Customer Service Center before installation.**

(Places where many fine dusts are generated, places where chemicals are used, places with too high or low temperatures, places with a lot of moisture or water, transportation equipment such as vehicles, airports and stations used continuously for a long time, and more)

🚫 **Do not install the product in a poorly ventilated space such as bookcase or closet.**

An increased internal temperature may cause a fire.

🚫 **Keep the plastic packaging out of the reach of children.**

Children's misuse of the plastic packaging may cause suffocation.

🚫 **Do not install the power cable (DC power supply) and the product near head sources.**

(Candles, mosquito repellents, cigarettes, sprays, heating devices, places exposed to direct sunlight, and more)

Operation

⚠ Warning

🛈 **If the product generates a strange noise, a burning smell, or smoke, unplug the power plug immediately and contact your Samsung Customer Service Center.**

An electric shock or fire may result.

🛈 **If a gas leakage is found, do not touch the product or the power plug, and ventilate the room immediately.**

Sparks can cause an explosion or fire.

🚫 **Keep the remote control batteries and the small accessories out of the reach of children. Ensure children do not swallow any of them.**

If children have had the battery in their mouths, consult your doctor immediately.

🚫 **If the product is dropped or its appearance is damaged, turn off the power switch and disconnect the power cord. Then contact Samsung Customer Service Center.**

Continued use can result in an electric shock or a fire.

🚫 **Do not move the product by pulling the power cord or any cable.**

Product failure, an electric shock or fire may result from a damaged cable.

🚫 **Ensure the vents are not blocked by tablecloths or curtains.**

An increased internal temperature may cause a fire.

🚫 **Do not apply an impact to the product.**
- The screen display may be damaged.
- An electric shock or fire may result.

🚫 **Do not insert metallic objects (chopsticks, coins, hairpins, etc) or objects that burn easily (paper, matches, etc) into the product (via the vent or input/output ports, etc).**
- If foreign substances enter the product, be sure to power off the product and disconnect the power cord. Then contact Samsung Customer Service Center.
- Product failure, an electric shock or fire may result.

🚫 Do not place objects containing liquid (vases, pots, bottles, etc) or metallic objects on top of the product.

- If foreign substances such as water enter the product, be sure to disconnect the power cord. Then contact Samsung Customer Service Center.
- Product failure, an electric shock or fire may result.

🚫 During a lightning or thunderstorm, power off the product and disconnect the power cord.

An electric shock or fire may result.

🚫 While the power plug is plugged into a power socket, do not insert a chopstick or other conductor into a remaining power socket. Also, after disconnecting the power plug from the power socket, do not touch the pins of the plug immediately.

Otherwise, an electric shock may result.

🚫 There is a high voltage inside the product. Never disassemble, repair or modify the product yourself.

- Contact Samsung Customer Service Center for repairs.
- An electric shock or fire may result.

🚫 Do not use humidifiers or stoves around the product.

An electric shock or fire may result.

⚠️ Caution

❗ Insert each battery so that its polarity (+, −) is correct.

If the polarity is not correct, the battery may rupture or the internal fluid may leak, causing contamination and damage to the surroundings, fire, or personal injury.

❗ When you do not use the product for a long time due to vacation or other reason, disconnect the power cord from the power socket.

Dust accumulation combined with heat can cause a fire, electric shock or electric leakage.

❗ The batteries (and rechargeable batteries) are not ordinary refuse and must be returned for recycling purposes. The customer is responsible for returning the used or rechargeable batteries for recycling.

The customer can return used or rechargeable batteries to a nearby public recycling center or to a store selling the same type of the battery or rechargeable battery.

❗ Do not use or keep combustible spray or an inflammable substance near the product.

An explosion or fire may result.

🚫 Do not place heavy objects on the product.

Product failure or personal injury may result.

🚫 Use only the specified standardized batteries, and do not use a new battery and a used battery at the same time.

Otherwise, the batteries may be damaged or cause fire, personal injury or damage due to a leakage of the internal liquid.

🚫 Do not lift or move the product when it is in operation.

Cleaning

⚠ Warning

🚫 **Do not spray water or cleaner directly on the product.**

- The product's surface may be damaged, or the markings may be erased.
- An electric shock or fire may result.

⚠ Caution

❗ **When cleaning, be sure to disconnect the power plug and wipe gently with a soft and dry cloth such as superfine fibers or cotton flannels to prevent scratches.**

The product's surface may be damaged, or the markings may be erased.

❗ **Only use a soft cloth (e.g. microfiber, flannel) on the surface of the product to avoid scratches.**

The product's surface or the screen display can be easily scratched with foreign substances.

🚫 **Do not apply chemicals containing alcohol, solvent, or surfactant such as wax, benzene, thinner, pesticide, air freshener, lubricant, or cleaner to the product.**

The product's exterior may be discolored or cracked, the surface of the screen may be peeled off, or the markings may be erased.

2 Turn the remote over, and then slide the body of the remote upwards until the battery compartment is revealed.

3 If there are batteries in the remote, press the ▶ and ◀ buttons on both sides of the battery compartment to remove the existing batteries.

4 Insert two new batteries (1.5V AAA type) into the battery compartment making sure that the batteries' polarities (+, -) are oriented correctly. When done, slide the body of the remote until it is nearly in its original position.

5 Turn the remote over, press and hold the ▲ button on the top rear, and then slide the body of the remote down into place.

• Alkaline batteries are recommended for longer battery life.

Prior to Installation

Precautions for installation

- It is recommended that this device be installed in a 19-inch rack case, rather than under general consumer environment conditions.
- Make sure that the ambient temperature inside the rack does not exceed 35°C.
- If installing more than one M-Box, ensure that there is a space of at least 1U (approximately 44.45 mm) between the M-Boxes to prevent the vent on top of each M-Box from being blocked.
- Make sure the vent faces upward. Do NOT install the device in portrait orientation or upside down.
- Make sure the vent on top is not blocked to prevent the device from overheating.
- Exercise caution to ensure that no foreign material enters the vent on top of the device.
- If installing the device close to a wall, make sure that there is a space of at least 10 mm between the wall and the four sides of the device to ensure good ventilation.
- Make sure that there is a space of at least 50 mm between the wall and the rear ports of the device to gain access for connection of cables.
- Make sure at least 15.2 m (50 ft) distance is ensured between the modem and the Bluetooth/Wi-Fi module.

Air outlet
Installing M-Box on Rack Case

✎ The color and shape of parts may differ from what is shown. Specifications are subject to change without notice to improve quality.
1 Attach the brackets to both sides of the M-Box main unit.
2 Fix the M-Box to the rack case.

✎ Use appropriate screws that are compatible with the rack case size.

Connecting and using devices

Before Connecting

Pre-connection Checkpoints

✎ Also refer to the user guide for the source device you want to connect with.
The number and location of ports available on the source device may vary.

✎ Do not connect the power cable until all connections are completed.
Connecting the power cable during connection may damage the product.

✎ Check the types of ports at the back of the product you want to connect.

CLASS 1 LASER PRODUCT

- Caution - Invisible laser radiation when open. Do not stare into beam.
  – Do not bend or cut cables excessively.
  – Do not place heavy objects on the cable.
  – Do not disassemble the connector of the cable.
- Caution - Use of controls, adjustments, or the performance of procedures other than those specified herein may result in hazardous radiation exposure.

Connecting to a PC

- Do not connect the power cable before connecting all other cables.
  Ensure you connect a source device first before connecting the power cable.

- A PC can be connected to the product in a variety of ways.
  Select a connection method suitable for your PC.

Using an HDMI Cable or HDMI to DVI Cable

- For better picture and audio quality, connect to a digital device using an HDMI cable.

- If the product is connected to an external device that is compatible with an older HDMI version, the product may not display screen colors properly. It may also display a blank screen.
  If such a problem occurs, ask the manufacturer of the external device about the HDMI version and, if out of date, request an upgrade.

- Be sure to use an HDMI cable with a thickness of 14 mm or less.

- Be sure to purchase a certified HDMI cable. Otherwise, the picture may not display or a connection error may occur.

- A basic high-speed HDMI cable or one with ethernet is recommended.
  This product does not support the ethernet function via HDMI.

Connecting the LAN Cable

✎ Connecting parts may differ in different products.

LAN
- Use a cable of CAT 6 (*STP type) or higher.
  *STP: Shielded Twisted Pair

  ✎ Connect to a HUB or router that supports the DHCP function.

Connecting a Optical Cable

✎ Connecting parts may differ in different products.
ONE CONNECT

- Use special caution to ensure that the connector is connected correctly. Incorrect connection may cause malfunction.
  Connect the cable to the connector in the direction shown in the figure. Insert the cable gently until a "click" sound is audible.

External Device Connection Cables

These are descriptions on connection cables used to connect external devices to the product.

Connection Cable	Image	Description
HDMI to HDMI		Transmits digital video and audio signals from the external device simultaneously via the product's HDMI port. The cables come in a wide variety, depending on the types of the input and output ports used on the external device.
HDMI to MINI HDMI		
HDMI to Micro HDMI		
HDMI to USB Type-C		
HDMI to DisplayPort		
Mini DisplayPort to HDMI		

Connection Cable	Image	Description
DVI to HDMI		DVI to HDMI cables may transmit digital video signals only and not audio signals. Accordingly, the use of an HDMI to HDMI cable is recommended.
Optical		This type of cable is used to transmit audio signals to external speakers with minimal loss. Optical cables do not transmit video signals.
Component		A cable used to transmit analog signals. The cable splits video signals into red, green, and blue channels and transmits the signals in FHD quality. Audio signals are transmitted via the red and white channels.
Composite		A cable used to transmit analog signals. Video signals are transmitted via the yellow channel, whereas audio signals are transmitted via the red and white channels.

✎ Available connection cables may differ depending on the model or geographical area.

Connecting using an HDMI Cable

- The following types of HDMI cables are recommended:
  - High Speed HDMI Cable
  - High Speed HDMI Cable with Ethernet
  - Premium High Speed HDMI Cable
  - Premium High Speed HDMI Cable with Ethernet
  - Ultra High Speed HDMI Cable
- Use an HDMI cable that is less than 17 mm thick to ensure an optimal connection.
- Use of an non-certified HDMI cable may result in a blank screen or a connection error.
- Certain HDMI cables and external devices may not be compatible with the product's HDMI version.
- This product does not support Ethernet access over HDMI. Ethernet is a Local Area Network (LAN) model utilizing standard coaxial cables of the IEEE.
- Use a cable that is less than 3 m in length to get the best UHD-viewing quality.
- Depending on the type of the graphic card used, certain computers may not support HDMI. If connecting a computer that does not support HDMI, use an DVI to HDMI cable or HDMI to DisplayPort cable to connect the computer to the product.
- Connecting the product to an external device (DVD/Blu-ray player, set-top box, etc.) via an HDMI cable automatically activates Power Synchronization Mode. Power Synchronization Mode continuously monitors external devices that are connected via an HDMI cable. To disable this feature, disconnect the HDMI cable from the external device.

🖉 Depending on the model, this feature may not be supported.

Before Using Bixby

- Languages supported by Bixby and available Bixby features may vary depending on the region.
- Certain Bixby features will not be available if a language other than the national language has been set.
- Bixby is only available when the product is connected to the internet.
- Even if there is internet access, Bixby may not respond due to a server error.
- Once Bixby is updated, operating specifications of existing features may change.
- Bixby requires a Samsung Smart Remote with a built-in microphone and a Samsung product that supports voice recognition.
- Special characters and symbols like "-" are not supported. In addition, words and phrases that include numbers and symbols may not be recognized properly.
- The search term and the search result may not match.
- Certain apps may charge a fee for using their services and/or involve a separate service application or agreement process.
- In order to change channels using voice commands, you must first complete the Set Up Your Service Provider process. If Set Up Your Service Provider was not completed, it is possible to complete the configuration from Reset (⌂ → ⚙ Settings → General → Reset)
- In order to use the voice-to-text and smart search features, the user must agree to sharing their voice data with a third-party provider of voice-recognition services.
- Use of Bixby requires the user's consent to the following agreements:
  – Smart Hub User Agreement
  – Collection and Use of Personal Information for Smart Hub Services
  – Collection and Use of Personal Information for Voice-Recognition Services.

Requirements for Bixby Use

- Voice-recognition performance can be influenced by the volume and tone of the voice, the accuracy of pronunciation, and the operating environment (product audio, ambient noise, etc.).
- The optimal vocal volume for voice recognition is between 75dB and 80dB.

Using Bixby

You can control the product by speaking voice commands into Samsung Smart Remote's microphone.

🖉 To use Bixby, the product must be connected to the internet.

🖉 To use Bixby, you must register and sign in to your Samsung account. Some functions may not be supported if you are not signed in to your Samsung account.

- Wireless / Wired

Network Settings (Wired)

Connecting to a Wired Network

There are three ways to attach your product to your LAN using cable.

- You can attach your product to your LAN by connecting the LAN port on the back of your product to an external modem using a LAN cable.
  See the diagram below.
- You can attach your product to your LAN by connecting the LAN port on the back of your product to an IP Sharer which is connected to an external modem. Use LAN cable for the connection. See the diagram below.
- Depending on how your network is configured, you may be able to attach your product to your LAN by connecting the LAN port on the back of your product directly to a network wall outlet using a LAN cable.
  See the diagram below. Note that the wall outlet is attached to a modem or router elsewhere in your house.
If you have a Dynamic Network, you should use an ADSL modem or router that supports the Dynamic Host Configuration Protocol (DHCP). Modems and routers that support DHCP automatically provide the IP address, subnet mask, gateway, and DNS values your product needs to access the Internet so you do not have to enter them manually. Most home networks are Dynamic Networks.

Some networks require a Static IP address. If your network requires a Static IP address, you must enter the IP address, subnet mask, gateway, and DNS values manually on your product IP Settings when you set up the network connection. To get the IP address, subnet mask, gateway, and DNS values, contact your Internet Service Provider (ISP).

If you have a Windows computer, you can also get these values through your computer.

✎ You can use ADSL modems that support DHCP if your network requires a Static IP address.

✎ ADSL modems that support DHCP also let you use Static IP addresses.

✎ It is not possible to use an ADSL modem if your Internet speed is below 10 Mbps.

Set the network connection to use Internet services such as perform software upgrades.

Automatic Open Network Settings (Wired)

Connect to the network using a LAN cable.

Make sure a LAN cable is connected first.

How to set up automatically

1 Select Open Network Settings. The Open Network Settings session starts.

2 The network test screen appears and verifies the network connection.

When the connection has been verified, the "Success! Your device is connected to the Internet. If you have any problems using online services, please contact your Internet service provider." message appears.

✎ If the connection process fails, check the LAN port connection.

✎ If the automatic process cannot find the network connection values or if you want to set the connection manually, go to the next section(Manual Open Network Settings (Wired)).

Manual Open Network Settings (Wired)

Offices may use static IP addresses.

If this is the case, ask the network administrator for the IP address, subnet mask, gateway and DNS server address. Enter these values manually.

Getting the Network Connection Values

To view the Network connection values on most Windows computers, follow these steps.

1 Right click the Network icon on the bottom right of the screen.

2 In the pop-up menu that appears, click Status.

3 On the dialog that appears, click the Support tab.

4 On the Support Tab, click the Details button. The Network connection values are displayed.

✎ The path to the settings depends on the installed OS.

How to set up manually

1 Select Open Network Settings. The Open Network Settings session starts.

2 The network test screen appears and the verification process starts. Press Cancel. The verification process stops.

3 Select IP Settings on network connection screen. The IP Settings screen appears.

4 Set the IP Setting option to Enter manually and provide the network details from your computer.

✎ Setting IP Setting to Enter manually automatically changes DNS Setting to Enter manually.

5 When finished, select OK. The product will attempt again to connect to the network based on the new settings.

6 When the connection has been verified, the "Success! Your device is connected to the Internet. If you have any problems using online services, please contact your Internet service provider." message appears.

Network Settings (Wireless)

Connecting to a Wireless Network

Wireless IP sharer
(router having DHCP server)

The LAN Port on the Wall

LAN Cable
Samsung recommends using IEEE 802.11n. When you play video over a network connection, the video may not play smoothly.

✎ Select a channel for the wireless IP sharer that is not currently being used. If the channel set for the wireless IP sharer is currently being used by another device nearby, this will result in interference and communication failure.

✎ Your product supports only the following wireless network security protocols.
If you select the Pure High-throughput (Greenfield) 802.11n mode and the Encryption type is set to WEP, TKIP or TKIP AES (WPS2Mixed) on your AP or wireless router, Samsung products will not support a connection in compliance with new Wi-Fi certification specifications.

✎ If your wireless router supports WPS (Wi-Fi Protected Setup), you can connect to the network via PBC (Push Button Configuration) or PIN (Personal Identification Number). WPS will automatically configure the SSID and WPA key in either mode.

✎ Connection Methods: You can setup the wireless network connection in three ways.
Auto Setup (Using the Auto Network Search function), Manual Setup, Use WPS

✎ Make sure at least 15.2 m (50 ft) distance is ensured between the modem and the Bluetooth/Wi-Fi module.

✎ Depending on your wireless network environment, you may experience wake up delay while Screen Mirroring Wake Up is enabled.

Automatic Network Setup (Wireless)

Most wireless networks have an optional security system that requires devices that access the network to transmit an encrypted security code called an Access or Security key. The Security key is based on a Pass Phrase, typically a word or a series of letters and numbers of a specified length you were asked to enter when you set up security for your wireless network. If you use this method of setting up the network connection, and have a Security key for your wireless network, you will have to enter the Pass Phrase during the automatic or manual setup process.

How to set up automatically

1 Set Network Type to Wireless from the Open Network Settings page.

2 The Network function searches for available wireless networks. When done, it displays a list of the available networks.

3 Select the router from the list and press Select.

   ✎ If the desired wireless router does not appear, select Refresh to search again.

   ✎ If the router cannot be found after retrying, select the Stop button.
The Add Network button appears.

4 If the Enter the password for (AP Name). screen appears, go to step 5. If you select a wireless router that does not have security, go to step 7.

5 If the router has security, enter the Enter the password for (AP Name). (Security key or PIN).

6 When finished, select Done. The network connection screen appears and the verification process starts.

   ✎ A connection with the router is established, but the Internet cannot be accessed.

7 When the connection has been verified, the "Success! Your device is connected to the Internet. If you have any problems using online services, please contact your Internet service provider." message appears.

Manual Network Setup (Wireless)

Offices may use static IP addresses.

If this is the case, ask the network administrator for the IP address, subnet mask, gateway and DNS server address. Enter these values manually.

Getting the Network Connection Values

To view the Network connection values on most Windows computers, follow these steps.

1 Right click the Network icon on the bottom right of the screen.

2 In the pop-up menu that appears, click Status.

3 On the dialog that appears, click the **Support** tab.

4 On the **Support** Tab, click the **Details** button. The Network connection values are displayed.

How to set up manually

1 Set Network Type to Wireless from the Open Network Settings page.

2 The Network function searches for available wireless networks. When done, it displays a list of the available networks.

3 Select the router from the list and press **Select**.

   🖉 If the desired wireless router does not appear, select Refresh to search again.

   🖉 If the router cannot be found after retrying, select the Stop button. The Add Network button appears.

4 If the Enter the password for (AP Name). screen appears, go to step 5. If you select a wireless router that does not have security, go to step 7.

5 If the router has security, enter the Enter the password for (AP Name). (Security key or PIN).

6 When finished, select Done. The network connection screen appears and the verification process starts.

7 Select Cancel while network connections are being attempted. This will stop the connection.

8 Select IP Settings on network connection screen. The IP Settings screen appears.

9 Select the field at the top, press **Select**, and then set IP Setting to Enter manually. Repeat the entry process for each field in the IP Address.

   🖉 Setting IP Setting to Enter manually automatically changes DNS Setting to Enter manually.

10 When finished, select OK. The network test screen appears and the verification process starts.

11 When the connection has been verified, the "Success! Your device is connected to the Internet. If you have any problems using online services, please contact your Internet service provider." message appears.

🖉 **Anynet+** supports up to 12 AV devices in total. Note that you can connect up to 3 devices of the same type.

Troubleshooting for Anynet+

Problem	Possible Solution
Anynet+ does not work.	• Check if the device is an Anynet+ device. The Anynet+ system supports Anynet+ devices only. • Check if the Anynet+ device power cord is properly connected. • Check the Anynet+ device's Video/HDMI cable connections. • Check whether Anynet+ (HDMI-CEC) is set to On in the External Device Manager menu. • Check whether the remote control is Anynet+ compatible. • Anynet+ doesn't work in certain situations. (initial setup) • If you have removed and then reconnected the HDMI cable, please make sure to search devices again or turn your product off and on again. • Check if the Anynet+ function of the Anynet device is set on.
I want to start Anynet+.	• Check if the Anynet+ device is properly connected to the product and check if the Anynet+ (HDMI-CEC) is set to On in the External Device Manager menu.
I want to exit Anynet+.	• Press the ⬚ button on the product remote control and select a non- Anynet+ device.
The message "Disconnecting Anynet+ device ..." appears on the screen.	• You cannot use the remote control when you are configuring Anynet+ or switching to a view mode. • Use the remote control after the product has completed Anynet+ configuration or has finished switching to Anynet+.
The Anynet+ device does not play.	• You cannot use the play function when initial setup is in progress.
The connected device is not displayed.	• Check whether or not the device supports Anynet+ functions. • Check whether or not the HDMI cable is properly connected. • Check whether Anynet+ (HDMI-CEC) is set to On in the External Device Manager menu. • Search Anynet+ devices again. • Anynet+ requires an HDMI connection. Make sure the device is connected to your product with an HDMI cable. • Some HDMI cables may not support Anynet+ functions. • If the connection is terminated because there has been a power failure or the HDMI cable has been disconnected, please repeat the device scan.

Chapter 10
Troubleshooting Guide

Requirements Before Contacting Samsung Customer Service Center

Testing the Product

Check if your product is operating normally by using the product test function.

If the screen remains blank while the power indicator blinks even when the product is correctly connected to a PC, perform product testing.

1 Power off both the PC and product.

2 Disconnect all the cables from the product.

3 Power on the product.

4 If No Signal is displayed, the product is operating normally.

If the screen remains blank, check the PC system, video controller and cable.

Checking the Resolution and Frequency

For modes that exceed the supported resolutions, the message "Not Optimum Mode" appears briefly.

Set the PC resolution by referring to Preset Timing Modes.

Check the followings.

Installation issue (PC mode)	
The screen keeps switching on and off.	Check that the cable between the product and the PC is connected correctly.
Blank spaces are found on all four sides of the screen when an HDMI or an HDMI-DVI cable is connected between the product and PC.	The blank spaces found on the screen have nothing to do with the product.
	Blank spaces on the screen are caused by the PC or graphics card. To resolve the problem, adjust the screen size in the HDMI or DVI settings for the graphics card.
	If the graphics card settings menu does not have an option to adjust the screen size, update the graphics card driver to the latest version.
	(Please contact the graphics card or computer manufacturer for further details about how to adjust the screen settings.)

Screen issue	
The power indicator is off. The screen will not switch on.	Make sure that the power cord is connected.
No Signal is displayed on the screen.	Check that the product is connected correctly with a cable.
	Check that the source device connected to the product is powered on.
Not Optimum Mode is displayed.	This message is displayed when a signal from the graphics card exceeds the product's maximum resolution and frequency.
	Refer to the Standard Signal Mode Table and set the maximum resolution and frequency according to the product specifications.
The images on the screen look distorted.	Check the cable connection to the product.
The screen is not clear. The screen is blurry.	Set the resolution and frequency to the recommended level.

Screen issue

The screen appears unstable and shaky.	Check that the resolution and frequency of the PC and graphics card are set within a range compatible with the product. Then, change the screen settings if required by referring to 'Preset Timing Modes'.
There are shadows or ghost images left on the screen.	
The screen is too bright. The screen is too dark.	Go to Picture and adjust the Brightness and Contrast settings.
Screen color is inconsistent.	Go to Picture and adjust the Color Space Settings settings.
White does not really look white.	Go to Picture and adjust the White Balance settings.
There is no image on the screen and the power indicator blinks every 0.5 to 1 second.	The status of product is in power-saving mode.
	Press any key on the keyboard or move the mouse to return to the previous screen.
The product will turn off automatically.	If a PC is connected to the product, check the power status of the PC.
	Make sure the power cable is connected properly to the product and power outlet.
	If the signal from a connected device is not detected, the product automatically turns off after 10 to 15 minutes.
The screen display does not look normal.	Encoded video content may cause the display to appear corrupted in scenes featuring fast moving objects such as in a sports event or action video.
	Low signal level or low picture quality may cause the display to appear corrupted. This does not mean the product is defective.
	A cell phone within a distance of one-meter radius may cause static on analog and digital products.

Screen issue

The brightness and color do not look normal.	Go to Picture and adjust the screen settings such as Picture Mode, Color, Brightness and Sharpness.
	Reset the screen settings to the default settings. (P.36)
I see red, green, and blue.	Check the cable connections.
	This issue may happen when the screen of the product is defective. Contact a Samsung Service Center to resolve the issue.
The display looks unstable and then freezes.	The screen may freeze when a resolution other than the recommended resolution is used or if the signal is not stable. To resolve the issue, change the PC resolution to the recommended resolution.
The screen cannot be displayed in full screen.	A scaled SD (4:3) content file can cause black bars on both sides of an HD channel screen.
	A video with an aspect ratio different from the product can cause a black bar to appear at the top and bottom of the screen.
	Change the screen size setting to full screen on the product or source device.
The cabinet screen blinks.	Check the Optical cable connected to the device.
	Check that the Optical cable is correctly connected to the device.
	Check that there is no foreign material found in the ONE CONNECT port (optical) on the device.

Remote control issue

The remote control does not work.	Make sure that the batteries are correctly in place (+/-).
	Check if the batteries are flat.
	Check for power failure.
	Make sure that the power cord is connected.
	Check for any special lighting or neon signs switched on in the vicinity.

Source device issue	
A beeping sound is heard when my PC is booting.	If a beeping sound is heard when your PC is booting, have your PC serviced.

Other issue	
The product smells like plastic.	The plastic smell is normal and disappears over time.
Video playback is choppy.	Check the cable connection and connect it again if required.
	Use a standard cable.
Small particles are found on the edges of the product.	The particles are part of the product design. The product is not defective.
When I try to change the PC resolution, a message "The defined resolution is not currently supported." appears.	The message "The defined resolution is not currently supported." appears if the input source resolution exceeds the maximum resolution of the display.
	To resolve the issue, change the PC resolution to a resolution supported on the display.
HDMI Black Level is not functioning properly on an external device with HDMI YCbCr output.	This function is available only when a source device with RGB signal, such as a DVD player and STB, is connected to the product to HDMI cable.
The power indicator does not blink.	Press a button on the remote control and check that the power indicator blinks.
	• If the power indicator does not blink, check the product connection and then turn off the product and turn it on again.
	• If the power indicator does not blink although the cable is connected correctly and the product has been turned off and then on again, contact the nearest service center.

Preset Timing Modes

✎ Horizontal Frequency

The time required to scan a single line from the left to the right side of the screen is called a horizontal cycle. The reciprocal number of a horizontal cycle is called horizontal frequency. Horizontal frequency is measured in kHz.

✎ Vertical Frequency

The product displays a single image multiple times per second (like a fluorescent light) to display what the viewer sees. The rate of a single image being displayed repeatedly per second is called vertical frequency or refresh rate. Vertical frequency is measured in Hz.

✎ This product can be set to only one resolution for each screen size to obtain the optimum picture quality due to the nature of the screen. Using a resolution other than the specified resolution may degrade the picture quality. To avoid this, it is recommended that you select the optimum resolution specified for your product.

✎ The native resolutions are 3840 x 2160 at 60 Hz and 7680 x 4320 at 60 Hz with the **Input Signal Plus** set to **On**. The native resolution is 3840 x 2160 at 30 Hz with the **Input Signal Plus** set to **Off**.

Model Name		SBB-MBOX
Synchronization	Horizontal Frequency	15 – 255 kHz
	Vertical Frequency	24 – 120 Hz
Resolution	Optimum Resolution	3840 x 2160 @ 60 Hz
	Maximum Resolution	7680 x 4320 @ 60 Hz

The screen will automatically be adjusted if a signal that belongs to the following standard signal modes is transmitted from your PC. If the signal transmitted from the PC does not belong to the standard signal modes, the screen may be blank with the power indicator on. In such a case, change the settings according to the following table by referring to the graphics card user manual.
